MORE INFO

BioPro Dianabol / Dbol

60 x 10mg Tablets

Each tablet contains:

Methandrostenolone 10mg

Dianabol is also commonly known as Dbol. Dianabol and Dbol are product names for the steroid Methandrostenolone. Methandrostenolone is also known as Methandienone. This type of steroid is the most popular steroid in the world. This is because it is known as an instant gratification steroid drug. Users can expect dramatic muscle weight and size increases of up to 20lbs in only a few weeks. It is often said that users are unreconisable after using Dbol Dianabol for a full cycle.

Dbol or Dianabol is not without its downsides too. Much of the gains are down to high water retention which is lost when the user discontinues using it. Dbol or Dianabol is also tough on the liver due to being a 17AA compound. See here for a more detailed account of issues with steroid abuse.

When used properly Dbol is a steroid that makes users very happy with their results. So eat well, train hard and if you want to increase muscle size and put weight on you will see the results you want to see.
